**Re: Sterilization of Identified Mineral Aggregate Resource
Part of Lots 27 and 28, Concession 9, Geographic Township of South Algona
Ruby Road Waste Disposal Site, Township of Bonnechere Valley
Cambium Ref.: 07-1219-001**

Dear Ms. Gaweda,

Thank you for your call yesterday regarding the lands surrounding the Ruby Road waste disposal site and the owner's current application to permit the entire property for aggregate extraction. On behalf of the Township of Bonnechere Valley (the Township), I would also like to thank you for your continued attention to this matter and for our meeting with you and Mike Dumouchel, MNR Aggregate Inspector, at the subject property on July 30, 2007. Following Mike Dumouchel's conversation with the property owner yesterday morning, the property owner called Township Councillor Mervin Buckwald to discuss the application and the Township's interest in the property. The application was submitted by the current property owner in its current form as a contingency in the event that the lands are not sold to the Township and in recognition of the Ministry of Natural Resources (MNR) "grandfathering" deadline for existing aggregate pit permitting. Assuming the sale of lands does proceed; the application will be modified accordingly for a reduced extraction area.

The Township and the property owner will continue their discussions regarding the purchase of the lands to accommodate an increase to the Ruby Road waste disposal site capacity. In the meantime, the Township will continue to assess the viability of the site expansion and confirm there are no insurmountable barriers to the proposed undertaking.

The Township is conscious of the identified potential aggregate resources on the subject property and is seeking to confirm that the MNR does not consider the sterilization of potential mineral aggregate resources on the lands as an issue of concern. It is the position of the Township that the proposed land use of waste disposal activities on the subject property will serve a greater long-term interest versus the extraction of any potential aggregate with the final waste disposal site. As such, the Township would amend the zoning and Official Plan accordingly.

Notes:	

In response to your letter of August 2, 2007, requesting comments with respect to the Township's position regarding possible future land use at the above referenced lands, the Ministry of Natural Resources (MNR) offers the following comments.

The MNR does not oppose the theoretical use of a portion of the above property for waste disposal. The MNR would not oppose a rezoning of the property from EM in the short term, provided that the permitted uses in the rezoned area include extraction of aggregate, any accessory uses and structures associated with extraction. In this way the landowner could continue to pursue the licensing of the entire area in the interim. The Aggregate License could be amended to reduce the extraction area once the Township establishes that no other barriers exist for the municipal project, and purchases the area required for waste disposal.

Alternatively, the Township could hold off on any re-designation and rezoning until these further details are known.

The preference is that the Township continue the necessary assessments to ensure that there are no significant barriers to the project and to determine how much area on the property would be necessary for the waste facility, attenuation area, etc in order to rezone the appropriate amount of land.

We trust this information is useful for the purposes of your project. Please contact me with any questions or comments at 613-732-5522 or Joanna.gaweda@ontario.ca.

Sincerely,

Joanna Gaweda
District Planner
Pembroke District

**Re: Request for Information Relating to Ruby Road Waste Disposal Site
Township of Bonnechere Valley Environmental Screening Process
Cambium Ref No. 07-1219-001**

Dear Mr. LeSieur,

The Township of Bonnechere Valley (Township) has initiated the Environmental Screening Process (ESP) in accordance with Ontario Regulation 101/07 under the *Environmental Assessment Act* (EAA). This regulation is directed partially at small, rural waste disposal sites whereby select waste projects are deemed exempt from Part II of the EAA if the environmental screening process is completed. The ESP is intended to determine the feasibility of a capacity expansion at the Ruby Road waste disposal site as a long-term (25-year) solution that will best meet the needs of the municipality with respect to the management of municipal solid waste generated within its boundaries. The Notice of Commencement for this project is attached.

The study area for this project is the Ruby Road waste disposal site and its surrounding lands, located at 2213 Ruby Road, Lot 27, Concession 9, in the geographic Township of South Algona, in the amalgamated Township of Bonnechere Valley, in the County of Renfrew.

Cambium requests that any existing information specific to the study area related to your agency's mandate be provided to our office in support of the ESP.

The Township of Bonnechere Valley and Cambium sincerely appreciate your cooperation in this matter.

Should there be any specific questions regarding the information in this letter or if there is anything that our office can do to support the provision of the requested information, please do not hesitate to contact the undersigned at (705) 742-7900 extension 202.

Best regards,

Cambium Environmental Inc.

Dear Ms. Bachynski:

**RE: Request for Information Relating to Ruby Road Waste Disposal Site
Township of Bonnechere Valley Environmental Screening Process
Cambium Ref No. 07-1219-001**

Thank you for circulation to the Ministry of Natural Resources (MNR) for comments regarding the proposed expansion of the Ruby Road Waste Disposal Site located at 2213 Ruby Road, Lot 27, Concession 9, in the geographic Township of South Algona. Upon review of the existing information the MNR has the following comments:

Streams / Fish Habitat:

There are no known streams on the subject property however there are tributaries of Golden Lake located on adjacent properties. There are privately stocked fish ponds in the headwater areas of the two larger streams that support trout which may indicate that downstream areas have coldwater potential (Figure 1). The permanency of these stream systems should be confirmed; they have potential to be permanent in parts and to support coldwater fish habitats. Other similar tributaries of Golden Lake are known to support brook trout (for example Silver Creek system to the south).

The landfill is located in the watersheds of several stream systems and groundwater connections need to be considered. Leachate contamination of ground water in the vicinity of the landfill is a potential threat to any adjacent fisheries values (leachate is considered a deleterious substance under the *Fisheries Act*). The size of the current leachate plume and the groundwater movement patterns should be investigated to ensure that leachate is not affecting groundwater and fisheries located in surrounding areas.

There is potential for fish from Golden Lake to access tributaries surrounding the landfill expansion proposal area. Golden Lake, a coldwater lake inline on the Bonnechere River, is known to support walleye, northern pike, yellow perch, rock bass, pumpkinseed, lake whitefish, cisco (lake herring), burbot (ling), common shiner, golden shiner, brown bullhead, grass pickerel, black crappie, rainbow smelt, smallmouth bass, largemouth bass, white sucker, and shorthead redhorse. Historically lake trout were also present in Golden Lake however they have been lost due to declining water quality and over-harvest.

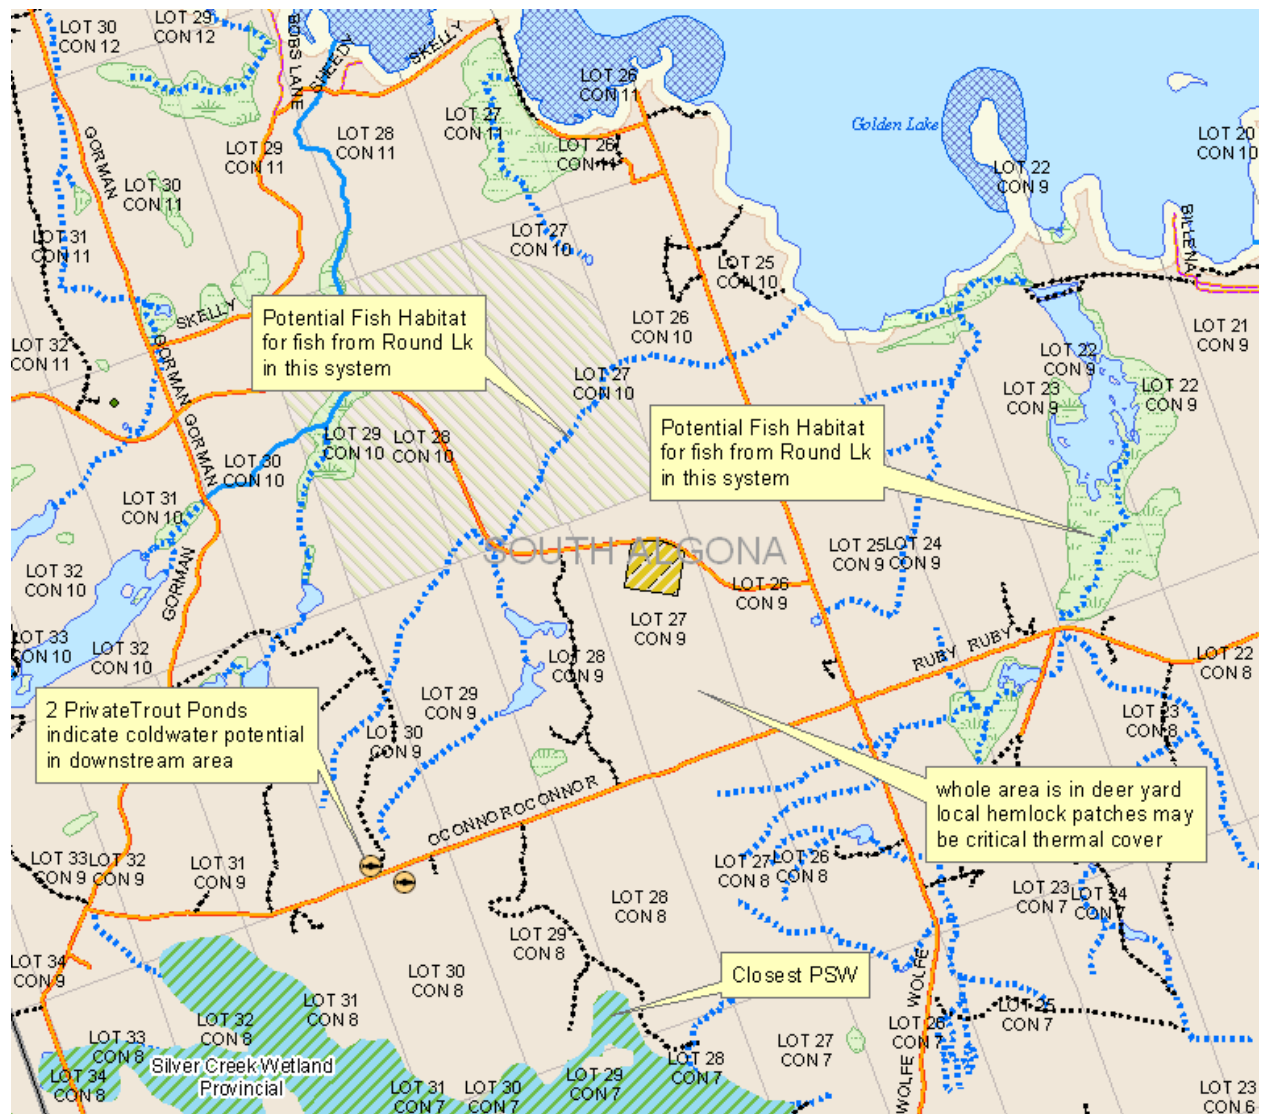

Figure 1. Map of area surrounding Lot 28, Concession 9 South Algonia Township illustrating fish and wildlife values.

The water quality of Golden Lake was impacted in the recent past by sewage outputs from the Town of Killaloe and continues to be impacted by extensive shoreline development. Further improvements in the lake’s water quality may eventually make it suitable for the re-introduction of lake trout if the walleye fishery doesn’t improve. The water levels of Golden Lake are managed by Renfrew Power generation (RPG), via Tramore dam located near the small community of Golden Lake. Whitefish and walleye are known to spawn below Tramore dam upstream of the lake on the Bonnechere River. Many of the Golden Lake’s tributaries are coldwater and are known to support brook trout.

Silver Creek and Silver Lake are part of the Zummachs Creek system that flows into the west side of Golden Lake. They are located to the south of the proposed landfill expansion area but not in the same watershed. Silver Creek is a coldwater value known to support brook trout. Other fish species known to be present in this stream system include northern redbelly dace, white sucker, common shiner, central mudminnow, brook stickleback, blacknose dace, bluntnose minnow, pearl dace, finescale dace and golden shiner. Silver Lake is also known to contain pumpkinseed, brown bullhead and yellow perch. It is possible that the streams surrounding the landfill may have similar fisheries potential.

Wetlands / PSWs:

There are no known wetlands on the lot associated with landfill expansion. The closest Provincially Significant Wetland is Silver Creek Wetland located approximately 800 m to the south of Lot 27, Concession 9 (green hatched area on Figure 1). The fisheries values of this wetland stream system are covered above. Silver Creek Wetland is known to be significant habitat for the least bittern (THR) and sedge wren (S4). There is potential for this very large wetland complex to support many other provincially significant species and habitats that are currently undocumented. There are no large unevaluated wetlands within the immediate area of the proposed landfill expansion however there are some smaller wetlands on the surrounding stream systems that have potential to provide significant wildlife habitat.

Figure 2. Map illustrating Forest Resource Inventory (FRI) in area surrounding Lot 28, Concession 9, South Algona Township.

Significant Wildlife Habitat:

A large portion of land surrounding Golden Lake, including the subject site, is within a deer wintering area. The Forest Resource Inventory (FRI) indicates that the forest on the lot containing the landfill site is likely dominated by sugar maple and beech with patches of hemlock and yellow birch (Figure 2). The hemlock patches are likely providing important winter thermal cover and bedding areas for the deer that winter here. The FRI

also indicates that approximately half of the property is possibly forested with the other half being open field or meadow. Other wildlife that are rare or of special concern known in the general area of the landfill property include, but are not limited to; milksnake (SC), redheaded woodpecker (SC), southern flying squirrel (SC), eastern wolf (SC), red-shoulder hawk (SC), and monarch butterfly (SC). These and other rare wildlife and plants (S1-S3) may use or have habitat on the landfill property and require consideration. The habitats of these species are considered Significant Wildlife Habitat and assessment to determine their presence or absence on the property needs to be investigated as part of the environmental screening process. If critical habitats of these species are present on the property, delineation, appropriate mitigation measures and/or the retention of critical habitat areas will need to be factored into the landfill expansion proposal.

Habitat of Threatened or Endangered Species:

There are no known occurrences of threatened or endangered species on the landfill expansion area or the lots immediately surrounding it. However there are known occurrences of American ginseng (END) and butternut (END) in this part of Renfrew County. Both species are typically associated with sugar maple stands so there is high potential for these endangered species to be present on the property. The presence or absence of these endangered species needs to be investigated as part the environmental screening process. If these species are present on the property, the retention of the species, identified habitat areas and appropriate forested setbacks will need to be factored into the landfill expansion proposal. Please treat all Species at Risk information as sensitive and confidential and do not share beyond the Township of Bonnechere Valley planning staff.

Aggregate Resources:

As you are aware, the subject area falls within a secondary aggregate deposit. A license has been issued on Part of Lot 27 and Lot 28, Concession 9 for a 44 hectare Class A gravel pit. As indicated in correspondence from this office on August 17, 2007, the MNR does not oppose rezoning and the theoretical use of a portion of the above property for waste disposal provided that the permitted uses in the rezoned area include extraction of aggregate and any accessory structures/uses associated with it. Collection of baseline data and information will assist in ensuring there are no significant barriers to the project and determine the appropriate amount of land to be rezoned.

The *Significant Wildlife Habitat Technical Guide* and the *Natural Heritage Reference Manual* are available online at <http://www.mnr.gov.on.ca/mnr/pubs/wildlife/swhtg.html> or http://www.mnr.gov.on.ca/MNR/pubs/nat_heritage_manual.pdf to assist you. Please do not hesitate to call me with any further questions at 613-732-5522 or erin.malloy@ontario.ca. Thank you again for your inquiry.

Dear Mr. Martin:

Subject: Proposal not likely to result in impacts to fish and fish habitat.

Fisheries and Oceans Canada - Fish Habitat Management Program (DFO) received your proposal on May 29, 2008. Please refer to the file number and title below:

DFO File No.: **PR-08-3507**
Title: **Ruby Road Waste Disposal Site Expansion, Township of Bonnechere Valley**

Your proposal has been reviewed to determine whether it is likely to result in impacts to fish and fish habitat which are prohibited by the habitat protection provisions of the *Fisheries Act* or those prohibitions of the *Species at Risk Act* that apply to aquatic species.*

Our review consisted of: Initial Environmental Impact Study Ruby Rd Waste Disposal Site

We understand that you propose to: Expand the existing Ruby Rd Waste Facility to accommodate for 25yrs of service.

Provided that your plans are implemented as described DFO has concluded that your proposal is not likely to result in impacts to fish and fish habitat.

*Those sections most relevant to the review of development proposals include 20, 22, 32 and 35 of the *Fisheries Act* and sections 32, 33 and 58 of the *Species at Risk Act*. For more information please visit www.dfo-mpo.gc.ca.

You will not need to obtain a formal approval from DFO in order to proceed with your proposal.

Please notify this office at least 10 days before starting the work. A copy of this letter should be kept on site while the work is in progress.

If the plans have changed or if the description of your proposal is incomplete you should contact this office to determine if the advice in this letter still applies.

Please be advised that any impacts to fish and fish habitat which result from a failure to implement this proposal as described could lead to corrective action such as enforcement.

If you have any questions please contact the undersigned at 613-925-2865 ext.114, by fax at 613-925-2245, or by email at mark.scott@dfo-mpo.gc.ca.

Yours sincerely,

Mark Scott
Fish Habitat Biologist

Dear Ms Bachynski,

At this time we do not have any schools using the Ruby Road Waste Disposal Site so changes here will not have any impact on us at this time. We are always interested in the result of your studies and appreciate being kept up to date on what is happening. We also appreciate you giving us the opportunity to comment on your study process.

Yours truly,

Wilmer Verch

Manager of Plant Operations

Subject: 07-1219-001 Township of Bonnechere Valley request for information from MOE

Dear Mr. LeSieur:

As you may be aware, the Township of Bonnechere Valley (Township) has initiated the Environmental Screening Process (ESP) in accordance with Ontario Regulation 101/07 under the *Environmental Assessment Act* (EAA). This regulation is directed partially at small, rural waste disposal sites and select waste projects are deemed exempt from Part II of the EAA if the environmental screening process is completed. The ESP is intended to determine the feasibility of a capacity expansion at the Ruby Road waste disposal site as a long-term (25-year) solution that will best meet the needs of the municipality with respect to the management of municipal solid waste generated within its boundaries.

The Ruby Road waste disposal site is located at 2213 Ruby Road, Lot 27, Concession 9, in the geographic Township of South Algona, in the amalgamated Township of Bonnechere Valley, in the county of Renfrew.

At this time Cambium retains copies of the following documentation from the MOE with respect to the site in query:

- Certificate of Approval A411501, prepared by the Ministry of the Environment, September 16, 1974, amended December 18, 2002 and November 5, 2003

- Bonnechere Valley Waste Management Study, presented by Bryce G. Bell, May 2000 Site Closure and Waste Transfer Facility Operations Plan, Prepared by Jp2g Consultants Inc., August 2002
- Non-Hazardous Waste Transfer Processing Inspection Report, prepared by Ministry of the Environment, Ottawa District Office, May 28, 2004
- Ruby Road Waste Disposal Site, Township of Bonnechere Valley, 2003 Annual Report, prepared by Jp2g Consultants Inc, March 2004
- 2004 Annual Report, Ruby Road Waste Disposal Site, prepared by SGS Lakefield Research Limited, March 28,2005
- 2005 Annual Report, Ruby Road Waste Disposal Site, prepared by SGS Lakefield Research Limited, March 27,2006
- 2006 Annual Report, Ruby Road Waste Disposal Site, prepared by Cambium Environmental Inc., April 24,2007

Cambium requests any further information the MOE Ottawa District Office feels may be pertinent to the background data collection for this project.

The Township of Bonnechere Valley (Township) and Cambium sincerely appreciate you cooperation in this matter.

If you have any questions regarding this submission, please do not hesitate to contact me at (705)742-7900 ext 213.

Cc: Bell,Dave [CEAA]
Subject: RE: 07-1219-001 Township of Bonnechere Valley Notice of Commencement

Dear Mr. Desbiens,

Thank you for the attached correspondence related to the Ruby Road Waste Disposal Site Environmental Screening Process. Please note that our main role at this point may be to help determine whether or not a federal EA is required for this proposed project. While I have provided more details below on our Agency's mandate, in general, in relation to the capacity expansion of a municipal landfill, a federal environmental assessment is not likely to be required unless federal funding may be provided, federal permits or licenses may be required, or the expansion may take place on federal lands. To discuss further, please contact Dave Bell at (416) 952-1574.

The *Canadian Environmental Assessment Act* (the Act) applies to federal authorities when they contemplate certain action or decisions in relation to a project that would enable it to proceed in whole or in part. A federal environmental assessment (EA) may be required when a federal authority:

- a) is the proponent of the project;
- b) provides financial assistance to the proponent;
- c) sells, leases or otherwise disposes of federal lands; or
- d) issues a permit, licence or any other approval as prescribed in the *Law List Regulations*.

In the case of projects that are subject to the Ontario *Environmental Assessment Act*, if there is uncertainty as to whether the Act may also apply, the Agency can help proponents answer this question. For projects that are subject to the Act, the

Agency will act as the federal environmental assessment coordinator and facilitate the involvement of the federal authorities in a co-ordinated assessment aimed at meeting all agencies' needs simultaneously.

In order for the Agency to undertake either of these roles, it must have a project description that can be distributed to various federal authorities to determine their interest in the project. It is recognized that at the early stages of the planning process, there may not be much detailed information to provide. However, proponents should try to provide some information on:

- the nature of the project and its location;
- federal decisions which may be made in relation to the project;
- whether federal funding is being contemplated or federal lands are required.

To better assist proponents, the Agency has developed an Operational Policy Statement, which provides guidance in preparing project descriptions. This is available on the Agency's website at: http://www.ceaa-acee.gc.ca/013/0002/ops_ppd_e.htm

If your purpose in sending us notification of your project is to determine whether the *Canadian Environmental Assessment Act* applies, please be aware that simple notification will not be sufficient. A project description will be required. If you have any questions regarding this matter, please contact Dave Bell 416-952-1574.

Good afternoon,

The position responsible for environmental assessment coordination and notification has varied through the years; however, we are making our best effort to minimize the level of misdirected mail (standard and electronic) and also to streamline notification methods and response procedure.

As such, INAC - Ontario Region has created a centralized email account where electronic notification and requests can be sent. As previously mentioned, this email address is EACoordination_ON@inac.gc.ca.

As reference, it is currently the position which I occupy that is responsible for responding to federal coordination requests and provincial-type environmental assessment notifications. Alternatively, our Senior Environmental Advisor, Cheyenne Loon, is responsible for our policies and processes related to Environmental Assessment.

Thank you again,
Daniel Johnson

John

Further to our conversation this morning and in response to your letter dated January 11, 2008.

I am screening this project to determine the level of involvement from my department. In order to do so I'd like to get a site plan or map showing more detail of the site and plans for development. Specifically I am interested to know of any watercourses that exist within, or adjacent to, the project area. As I was saying to you earlier those watercourses do not need to be navigable. Any depression in the ground that conveys water, either permanently or intermittently, will be of interest to me.

Thanks for your time and I look forward to hearing from you.
